

TechnologyStack

Date	01 October 2026
TeamID	SWTID-2026-2606
ProjectName	PocketSmart AI: Your Smart Budget&RecommendationAssistant
MaximumMarks	2Marks

DefineYourTechnologyStack

The selected technologies are aligned with the implemented PocketSmart AI architecture and are kept limited to technologies actually used or directly supporting the project.

S.No	Architecture Component/Layer	TechnologyChosen	Justification/Purpose
1	Frontend/Client-Side	HTML, CSS, JavaScript	Responsive client-side interface for landing, authentication, planners and recommendation results.
2	Backend/Server-Side	Python+FastAPI	Provides API routes, authentication, planner endpoints and server-side page handling.
3	Database/DataStorage	SQLite+SQLAlchemy	Stores users and recommendation history using a simple relational database.
4	Cloud/Hosting/Deployment	Uvicorn/FastAPI deployment	Runs the FastAPI application locally and supports deployment to a suitable Python hosting environment.
5	Version Control&CI/CD	Git+GitHub	Supports version control, collaboration, source-code submission and project documentation.
6	Third-Party APIs/Other Tools	Google Gemini API+Pillow	Gemini generates budget-aware recommendations and optional image-based jewelry recommendations; Pillow validates and processes uploaded images.
