User / Customer

Budget-conscious users planning purchases, home improvements, parties or jewelry for a specific occasion. The user wants to make practical decisions while staying within a fixed budget and prefers recommendations that consider their requirements and preferences.

Note: The empathy-map points below are ideation assumptions. They should not be presented as results of a real user interview or survey unless your team has actually conducted one.

THINK&FEEL

- “I need to stay within my budget.”
- “I want recommendations suitable for my requirements.”
- “I don't want to waste money on unnecessary items.”
- “I need to compare different options before deciding.”
- “I want the plan to be simple and easy to understand.”
- “I want recommendations that match my occasion or style.”
- “I want to know how much of my budget will be used.”

HEAR

- Suggestions from family and friends.
- Advice about suitable products and services.
- Recommendations about event planning and purchases.
- Opinions about home decoration and furniture.
- Suggestions about jewelry styles and occasions.
- Information about different online shopping platforms.

SEE

- Many products and services from different platforms.
- Different price ranges for similar items.

- Multiple choices for furniture, decoration and lighting.
- Different options for party venues, catering and entertainment.
- Different jewelry designs and styles.
- Online shopping and search platforms such as Amazon, Flipkart and IKEA.
- Event-related platforms such as Swiggy, Zomato and OYO.

SAY&DO

- Sets a budget before planning.
- Specifies requirements and preferences.
- Selects the type of planning required.
- Compares different options.
- Looks for suitable products or services.
- Tries to avoid exceeding the available budget.
- May want recommendations based on personal style.
- Saves or reviews previous recommendations.

PAIN

- Difficulty deciding how to distribute a limited budget.
- Too many choices available.
- Difficulty comparing suitable options.
- Risk of spending more than planned.
- Time required to search for suitable products/services.
- Difficulty matching recommendations to a particular occasion or style.
- Need to repeatedly plan similar expenses.
- Lack of a single place for different types of budget planning.

GAIN

- Stay within the planned budget.
- Receive personalized recommendations.
- Save time while planning.
- Understand estimated spending.
- Compare suitable options.
- Get recommendations based on requirements.
- Keep previous plans available for reference.
- Make more informed purchasing/planning decisions.

Central User Need

The user needs a simple, budget-aware planning assistant that can convert their budget and preferences into practical recommendations for different everyday planning needs.

This is consistent with PocketSmartAI's implemented concept: an AI-powered budget and recommendation assistant with Home Interior, Party and Jewelry planning modules.
